

WAN MUHAMMAD ADAM

AI Solutions Engineer | AI Developer | Applied AI & Backend Engineering

wanadamworkmail@gmail.com +60 10-837 9125 linkedin.com/in/wan-muhammad-adam-74409427a github.com/WanAdamm

PROFESSIONAL SUMMARY

Final-year Computer Science student with hands-on experience building agentic AI systems and enterprise software. Skilled at connecting AI services to SAP, SQL Server, facial recognition systems, and REST APIs on Azure, with a strong full-stack foundation and experience delivering features through peer-reviewed development workflows.

TECHNICAL SKILLS

AI & MACHINE LEARNING: Agentic AI Systems, Multi-Agent Orchestration, Azure AI Foundry, Grounded AI Workflows, Azure Speech Service, Machine Learning Fundamentals, Data Visualization (Tableau)

BACKEND & FRAMEWORKS: Node.js, FastAPI, Flask, Django, Java Servlet, REST API Design

DATA & PLATFORMS: PostgreSQL, SQL Server, Microsoft Azure, Google Cloud Platform, Docker, Git

ENGINEERING PRACTICES: GitHub Enterprise, Branch-Based Development, Pull Requests, Code Reviews, Issue Tracking, Agile Delivery

PROGRAMMING LANGUAGES: Python, Java, C++, JavaScript, R, SQL

FRONTEND: ReactJS, Flutter, Vite, TailwindCSS, Enterprise Web Components, Bootstrap

ENTERPRISE INTEGRATION: SAP, Axxon Face Recognition, Azure App Service, System Interoperability

EXPERIENCE

IT Trainee March 2026 - August 2026

B. Braun Medical Industries

Delivered React, Vite, Tailwind CSS, and FastAPI enhancements across user onboarding, contextual guidance, and identity-confirmation workflows.

Integrated SAP, the Axxon Face Recognition Module, and SQL Server with REST APIs deployed on Azure App Service.

Built grounded multi-agent orchestration workflows with Azure AI Foundry and Azure Speech Service for context-aware, voice-driven interactions.

Recorded 220+ contributions across private enterprise repositories using branch-based development, pull requests, peer code reviews, issue tracking, and Agile delivery practices.

Supported an internal knowledge-sharing platform through collaborative development and documentation contributions.

Private project names and implementation details are generalized to respect enterprise confidentiality.

PROJECTS

SeJahit

ReactJS / Vite / Java Servlet / Tomcat / PostgreSQL

Full-Stack Tailoring Service E-Commerce Platform

Built the ReactJS and Vite frontend and Java Servlet backend for complete client-server delivery.

Developed a PostgreSQL-backed REST API for item management, form handling, and validation.

Implemented UI design, application state, routing, and backend integration.

DuitWise

Flutter / Cross-Platform / State Management

Cross-Platform Personal Finance App

Delivered consistent cross-platform behavior across Android and iOS.

Used modular widgets and structured state management to support maintainability and feature growth.

Designed mobile-first navigation and performance-conscious user flows.

EDUCATION

Universiti Sains Malaysia

Expected graduation: October 2027

Bachelor of Computer Science (Intelligent Computing), with Honours

CGPA: 3.75 / 4.00 | Dean's List, Semester 1 - Present

Relevant coursework:

Programming Methodology & Data Structures, Design & Analysis of Algorithms, Database Organization & Design, Machine Learning and Computational Intelligence, Operating Systems

Certifications:

Introduction to Data Visualization by Tableau for the Semiconductor Industry; Introduction to Machine Learning for the Semiconductor Industry

EXTRACURRICULAR LEADERSHIP

Executive Committee Member

October 2023 - October 2025

MPDIK

Improved operational turnaround and team coordination while delivering events for 30-50 participants.

Owned end-to-end logistics, budgeting, and stakeholder communication across high-pressure programs.

Mentored committee members to strengthen the junior talent pipeline and team reliability.

Executive Committee Member

October 2023 - October 2024

Computer Science Society, USM

Provided full-cycle operational oversight for events serving hundreds of participants.

Directed logistics, AV systems, and venue operations to reduce setup downtime.

Contributed to the Technical Division and maintained key features of the society website.

Open to full-time software engineering roles from August 2027, after final examinations conclude in July.
